# PSYCHOLOGICAL PROBLEMS

# **KEY DEBATES**

- NATURE (biological) vs. NURTURE (learned/society)
- REDUCTIONISM (nature theories) vs. HOLISM
- FREE WILL (ABC Model) vs. DETERMINISM (Social Rank)

# **SCHIZOPHRENIA**

### **DEFINITION**

A psychotic disorder where people lose their sense of reality. Covers 1% of the population.

### SYMPTOMS

- Hallucinations (see/hear things that aren't there)
- thought disturbances
- Disorganised speech
- Catatonic behaviour (doesn't respond)

withdrawal from society

· Delusions (errors in reality

# **BIOLOGICAL THEORY**

# **Dopamine Hypothesis**

- Dopamine system is overactive - high levels of dopamine binding to receptors

# **Brain dysfunction**

- Less blood flow in frontal lobe (responsible for logic, reasoning, problem solving etc.)
- Reduced volume of hippocampus (poor cognitive functioning & accessing/processing memories)

### SOCIAL DRIFT THEORY

- 'Label' of schizophrenia could lead to the condition worsening - due to the associated stigma around mental illness
- -> discrimination
- Person withdraws from society (due to rejection by society symptoms & fear of discrimination) then...
- Leads to rejection by society -> leads to further deterioration of mental health

RESEARCH METHOD/ DESIGN

Lab experiment (double-blind) -

Completed the Card sort test (PFC

task) and BAR task (control task) on a

computer whilst having SPECT scan

# LIMITATIONS

- · Ignores nurture importance of upbringing & life events
- Reductionistfocuses too much on brain abnormalities

### LIMITATIONS

- ignores nature biological factors (brain dysfunction & hormones)
- doesn't explain cause & effect just effect of diagnosis

# CLINICAL DEPRESSION

### **DEFINITION**

A mood disorder where people have persistent feelings of sadness over a long period of time.

### SYMPTOMS

- · Low mood (sadness)
- Feeling hopeless
- · Low self-esteem
- No motivation/lack of interest in things
- Suicidal thoughts

# SOCIAL RANK THEORY(Evolution)

- We behave in a certain way for survival reasons
- When we lose a level of status we can lose confidence in our abilities (depressed state).
- If we to try to regain our rank we may suffer further losses which would be detrimental for our survival (be rejected from the social group). Therefore depression allows us to accept a subordinate role & reduces further conflict.

- Depression is the result of an Activating event,

which leads to irrational Beliefs, which then cause

- According to Ellis the 'B' is the most important part of

- Depression = result of irrational beliefs, individuals

who are prone to depression will perceive events in a

MODEL

more negative way than other people.

negative Consequences.

# LIMITATIONS

- Ignores nurture e.g. other life factors (e.g. trauma)
- Reductionistignores complex nature of depression

# LIMITATIONS

- chemical processes in the brain
- Free will- puts responsibility

# MENTAL HEALTH CONTINUUM

Good mental health = high self-esteem,

autonomy, self-actualisation, accurate

Mental Health Act (1959) - aims to reduce

diagnosed. Statistics: 1 in 4 in UK, affects both

sex equally, but men develop sz. earlier than

Difficult to measure as not all problems

women. Asians more likely to develop

KEY CONCEPTS

perception of reality

depression.

stigma & discrimination

Healthy	Mild	Moderate	Severe
	Disruption	Disruption	Disruption
Normal functioning	Common and reversible distress	Significant functional impairment	Severe and persistent functional impairmen

- · Ignores nature disregards role of
- solely on patient

# DANIELS ET AL. (1991) STUDY INTO THE EFFECTS OF **AMPHETAMINES ON SCHIZOPHRENIA**

# To see whether amphetamines affect PFC and WCST performance.

SAMPLE

**PROCEDURE** 

10 chronic schizophrenics from same hospital

repeated measures design

Participant received dose of

\* Did same 2-4 days later but

swapped (double-blind) \*

amphetamine or placebo

### FINDINGS & CONCLUSION No difference in BAR task (control)

- · Small difference between amphetamine & placebo in the WCST as some areas of the prefrontal cortex were active
- Amphetamines shown to increase the ability of the prefrontal cortex to focus in the WCST.

# LIMITATIONS OF STUDY

- · Sample too small (can't be generalised) & culturally biased (unrepresentative)
- · Ethical issues: using brain scans for research not medical reasons.

# TANDOC ET AL. (2015) STUDY INTO FACEBOOK & **DEPRESSION**

AIM

the model.

To see whether Facebook use predicted depression.

854 journalism students from 💓 🎑 US university (68% female)

# RESEARCH METHOD/ DESIGN

Questionnaire (online survey)

# PROCEDURE

Completed questionnaire:

- 1. Facebook usage and surveillance
- 2. Envy Scale
- 3. Depression symptoms
- \*Facebook surveillance involves looking at friends' status' but not commenting or posting own information.

# FINDINGS & CONCLUSION

- Heavy Facebook users = stronger feelings of envy.
- · Size of the network of FB friends not related to envy. FB envy was a predictor of depression.
- · Use of FB- not directly lead to depression. But, FB envy can lead to depression.

# LIMITATIONS OF STUDY

- Sample culturally biased (unrepresentative & can't be generalised)
- Self-report: participants could have lied due to social desirability.

# APPLICATIONS OF RESEARCH

# **NEUROPSYCHOLOGICAL TESTS & SCANS**

- · Wisconsin Card Sort test (WCST)- frontal lobe
- Beck Depression Inventory (BDI) severity of
- PET scan shows blood flow in the brain

# USE OF DRUGS TO TREAT CONDITIONS

Depression: anti-depressant drugs increase the number of neurotransmitters in the brain (serotonin or noradrenaline). Excess serotonin helps the neurons communicate better, which helps people feel less depressed.

Schizophrenia: anti-psychotic drugs act by blocking some of the dopamine receptors. By reducing the level of dopamine, it reduces the effects of the psychotic episode.

# PSYCHOTHERAPY - talking therapies (no drugs)

CBT – aims to change how the individual thinks & behaves- to confront the negative irrational thoughts and how they impact on the individual.

Uses Ellis' A-B-C model and adds D= Disputing (questioning) the persons irrational beliefs and E= Effect of changing the interpretation of an event.
